

## News Release

### **FDA Authorizes Marketing of Kabrita's Goat Milk-Based Infant Formula in the US**

*Kabrita's Goat Milk-Based Infant Formula is the first European infant formula to meet the FDA's nutrition and safety requirements and will increase availability of infant formula across the country.*

**BOSTON, July 11, 2023** – Kabrita USA, a division of Ausnutria, a company with over 75 years of infant formula expertise and experience worldwide, announced today that its Kabrita Goat Milk-Based Infant Formula (0-12 months) meets all the US Food and Drug Administration's (FDA) nutrition and safety requirements and is authorized to market in the US. Kabrita Goat Milk-Based Infant Formula is expected to be available in the US later this year.

Infant formula is an essential food product that is the sole source of nutrition for many babies in the US, and there is a need to strengthen and diversify the US infant supply.

"While breast milk is considered the optimum food for babies, we strongly believe parents supplementing or substituting with infant formula should have an option that can deliver similar benefits as breast milk during a critical period of growth and development," said Jacqueline Lipiec, general manager, Kabrita USA.

A recent study comparing Kabrita Goat Milk-Based Infant Formula to cow milk formula and using breast-fed newborns as a reference group found it was safe, well tolerated and resulted in similar growth in babies.

Kabrita is the number one goat milk-based infant milk formula brand worldwide and is already available in 35 countries around the world. The FDA authorization of Kabrita Goat Milk-Based Infant Formula expands the Kabrita brand in the United States; Kabrita Goat Milk-Based Toddler Formula has been available in the US market since 2014.

## **Why Goat?**

In a double-blind, randomized controlled trial meeting FDA's requirements, Kabrita Goat Milk-Based Infant Formula was found to support healthy growth and to be safe to use in infants from birth onwards. In addition, this study demonstrated Kabrita Goat Milk-Based Infant Formula to have good tolerability concerning incidents of reflux, colic, fussiness and gassiness. Kabrita Goat Milk-Based Infant Formula combines easy-to-digest goat milk protein with lactose and goat milk whey protein to achieve a formula that is easily digestible for two main reasons: first, the A2 beta-casein is very easy for babies to break down and digest, and second, the whey to casein ratio is similar to breast milk.

## **Conscientiously Made**

Kabrita Goat Milk-Based Infant Formula is made in the Netherlands and adheres to strict European standards that limit the use of antibiotics, growth hormones and pesticides. All milk is supplied from over 100 Dutch family-run goat farms that operate according to the Dutch Qualigoat system to guarantee hygiene, quality and animal welfare.
